PROFESSIONAL OBJECTIVE

Computer Science Engineering student specializing in scalable backend systems, intelligence modeling, and data analytics. Focused on bridging the gap between machine learning models and web backends.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Relevant Coursework: Data Structures, DBMS, Operating Systems, Machine Learning, AI, Computer Networks

TECHNICAL TOOLKIT

Programming: Python, Java, JavaScript, SQL

AI / Machine Learning: TensorFlow, Keras, Scikit-learn, Pandas, NumPy

Backend & Databases: Node.js, Express.js, FastAPI, REST APIs, MySQL, PostgreSQL, MongoDB

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook

FEATURED PROJECTS

1. Advanced RAG Assistant: NLP-driven document Q&A parsing assistant using LangChain and OpenAI.
2. GenAI Chatbot System: Intelligent context-aware multi-turn conversational chatbot.
3. Tomato Leaf Disease Prediction: Deep learning CNN classifier predicting crop leaf disease strains.
4. Machine Learning Projects: A curation of regression, classification, and dataset analysis pipelines.
5. Data Science Internship Tasks: Relational data cleansings and EDA completed during internship.

EXPERIENCE AREAS

- Data Science Projects: ETL design, outlier analysis, relational schema mapping.
- AI/ML Projects: CNN network tuning, classification scoring, vector tokenization.
- Personal Projects: Client/server integrations, JWT security, custom middleware.

HONORS & ACHIEVEMENTS

- Qualified GATE Computer Science (CS) 2025.
